School of Computing and Information Technologies

PROGCON - CHAPTER 1

=46

cby: Pamela
Galangsang

CLASS NUMBER: 24

SECTION: AC 192

NAME: renewor T. Teves

DATE: Nov 6, 2019

PART 1: Identify the following.

#14

Computer System 1. A combination of all the components required to process and store data using a computer.

Hardware 2. The equipment or physical devices that are associated with a computer.

Software 3. The computer instructions that tell the hardware what to do.

Programs 4. The instruction sets written by programmers.

Application software 5. A type of software such as word processing, spreadsheets, payroll and inventory, even games

Syntax Error 6. Errors in language or grammar.

System 7. Software such as operating systems like Windows, Linux, or UNIX

Input 8. Describes the entry of data items into computer memory using hardware devices such as keyboards and mice.   34

Inat symbol 9. Indicates an input operation and is represented by a parallelogram in flowcharts.

Input and Output 10. Represented by a parallelogram in flowcharts.

cessing Data Items 11. May involve organizing them, checking them for accuracy, or performing calculations with them.

Processing Symbol 12. Indicates a processing operation and is represented by a rectangle in flowcharts.

CPU 13. The hardware component that processes data.

Output 14. Describes the operation of retrieving information from memory and sending it to a device, such as a monitor or printer, so people can view, interpret, and use the results.

Output symbol 15. Indicates an output operation and is represented by a parallelogram in flowcharts.

Programming language 16. Used to write computer instructions called program code; used to write programs.

gramming Language 17. Also includes languages such as Visual Basic, C#, C++, Java.

Syntax Error 18. Grammar rules of a language.

Syntax Error 19. Errors in language or grammar.

RAM 20. The temporary, internal storage within a computer. Computer Memory

NonVolatile 21. Describes storage whose contents are retained when power is lost.

Interpreter 22. Translates a high-level language into machine language and tells you if you have used a programming language incorrectly.

Logical Error 23. Errors in program logic produce incorrect output

Variable 24. A named memory location whose value can vary.

25. People who benefit from using computer programs.

Users or end users

Documentation 26. Consists of all the supporting paperwork for a program.
algorith 27. The sequence of steps necessary to solve any problem.
Desk checking 28. The process of walking through a program's logic on paper.
Coding^th Programming 29. The act of writing programming language instructions.
Repeating Instruction 30. When instructions are performed in the wrong order, too many times, or not at all.
Logical errors 31. Errors in program logic produce incorrect output
Test 32. Execute the program with some sample data to see whether the results are logically correct
De bugging 33. What is the process of finding and correcting program errors?
conversation 34. The entire set of actions an organization must take to switch over to using a new program or set of
Conversion programs
Maintenance 35. Consists of all the improvements and corrections made to a program after it is in production.

PART 2: Enumeration

a. 3 major components of a computer system?
b. 3 major computer hardware operations.
c. 4 most common planning tools.
d. 3 most common flowchart symbols.
e. 7 steps on a program development life cycle.

$$\begin{array}{r} 1 \\ 12 \\ 7 \\ + \underline{27} \\ 46 \end{array}$$

a. 1. hardware
   2. software
   3. humanware ✗ application software

b. 1. Monitor Input
   2. keyboard Processing
   3. System Unit Output

c. 1. Flowcharts
   2. Psuedocode
   3. IPO charts (Input, processing and output)
   4. TOE charts (task, objective and events)

d. 1. Terminal symbol
   2. Input and output symbols
   3. Processing Symbol

e. 1. Understand the problem
   2. Plan the logic
   3. Write the code
   4. Translate the code
   5. Test the program
   6. Put the program into production
   7. Maintain the program
